QUICK REFERENCE GUIDE

Please find the package insert for products in the carton to review the complete Instructions for Use, cautions and precautions, and other pertinent information for safe use of these products.

Verisafe® Safety Sterile Syringes

Indication for Use

Verisafe® Safety Sterile Syringes are intended to inject fluids into the body or withdraw blood for medical purposes. After injection, the needle tube will be retracted into the barrel when the safety features are manually activated to minimize the risk of accidental sharps injury.

Sterile Single Use.

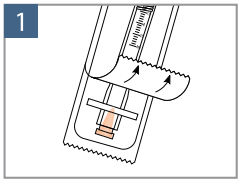

Intended User

Professional medical personnel.

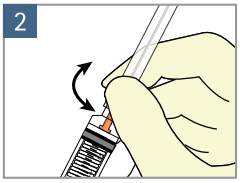

Aseptic technique

Use the product according to standard infection-control precautions and aseptic technique.

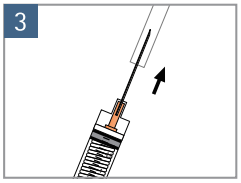

Instructions for use

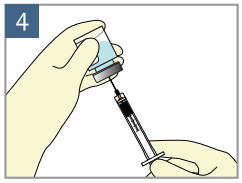

Remove the protective film and take out the syringe.

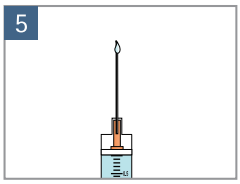

For Type D (a Syringe with a detachable needle), the needle and syringe should be assembled first.

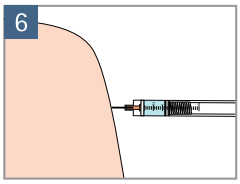

Remove the needle cap.

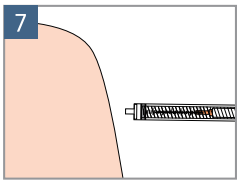

Extract liquid medicine.

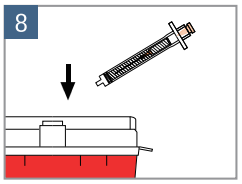

Put the needle upward and push the plunger until you see a drop of medication.

Push the needle quickly at 90° for injection.

After injection and while the needle is still inside the body, continue to press the push-button down to depress the plunger all of the way within the barrel. The needle tube will be retracted into the barrel under the visual inspection.

After activation, immediately discard into an approved sharps collector after single use.
